I. <i>Ophthalmology in Ancient Egypt</i>	(§2—13) p.1
The antiquity of Egyptian medicine	(§3)
The character of Egyptian medicine	(§ 3)
<i>Ophthalmology in Egypt; the Ebers Papyrus</i>	(§4)
<i>The eye diseases and eye medications</i> <i>mentioned in Ebers Papyrus</i>	(§5—13)
Conjunctivitis. No. 1—3.....	(§5)
Darkening within the eye. No. 4	(§5)
The dripping eye. No. 5	(§5)
Strengthening of an eye. No. 6.....	(§5)
Disappearance of the pupil. No. 7	(§5)
Stone formation. No. 8.....	(§5)
White scar. No. 9	(§5)
Blood suffusion. No. 10.....	(§6)
Strabismus. No. 11.....	(§6)
Fat (tumor). No. 12.....	(§6)
Hordeolum. No. 13.....	(§6)
Stupid vision. No. 14	(§6)
Crocodile disease? No. 15.....	(§6)
Edema? No. 16	(§6)
Phlegmona. No. 17.....	(§6)
Rising of the water. No. 18.....	(§7)
Tumor of the lacrimal sac. No. 19.....	(§7)
Diseases of hair. No. 20	(§7)

II. Ophthalmology in India	(§15—21) p.27
<i>History of Indian culture</i>	(§15)
<i>Indian medicine</i>	(§ 16A)

<i>The ancient Sanskrit manuscripts on medicine</i>	(\$16B)
<i>Cataract operation in India</i>	(\$17)
<i>Cataract operation described by Sucruta</i>	(\$18)
<i>Cataract operation in India in the 19th century</i>	(\$19A)
<i>Success rate of various cataract operations</i>	(\$19B)
<i>Ocular diseases described in Sucruta (and Charaka)</i>	(\$20)
Pathology (76 ocular diseases), diseases of the cornea, iris prolapse, diseases of the sclera, pterygium, chalazion, hordeolum Blenorrhoea of newborn, granular disease, anthrax, droopy lid, diseases of hair	
<i>Treatment of eye diseases</i>	(\$21A)
<i>The Bower manuscripts</i>	(\$21B)
<i>Ophthalmia neonatorum, lid abscess, foreign bodies</i>	(\$22)
<i>Evaluation of Indian medicine. Magnet extraction</i>	(\$23)
<i>References on Indian medicine</i>	(\$24)
<i>Medicine in Tibet</i>	(\$25)
<i>Medicine in China</i>	(\$26A)
<i>Sources on medicine in China</i>	(\$26B)
<i>Medicine in Japan</i>	(\$27)

<i>The life and work of Hippocrates; the various editions of the Hippocratic collections</i>	(\$32) p.66
<i>Anatomy and physiology of the visual organ as described in the books by Hippocrates and his pupils</i>	(\$33)
Nomenclature for various parts of the eye (the word "pupil" in various languages.)	
<i>General pathology of the visual organ as perceived by the School of Hippocrates and his pupils</i>	(\$34)
<i>About inflammations of the eye (ophthalmia)</i>	(\$35)
<i>Endemic and epidemic ocular inflammations</i>	(\$36)
<i>The prognosis of eye inflammations</i>	(\$37)
Pyorrhoea, corneal ulcer, perforation, scars, iris prolapse, ophthalmia neonatorum, scrophulous inflammation.	
<i>The treatment of ocular inflammations</i>	(\$38)
Bloodletting, avoiding topical medication, cold and warm compresses	(\$39)
<i>Diverting medication</i>	(\$40)
<i>Topical ocular medication of Hippocrates and his disciples</i> . .	
(\$41) (Copper and lead preparation)	

<i>Dietetics in eye diseases</i>	(§42)
<i>Organic eye diseases</i>	(§43)
I. Diseases of conjunctiva, compare § 35 and subsequent	
II. Diseases of the lids	(§43)
1. Hordeolum. 2. Inflammation of the lid margin.	
3. Phlegmon of the lids. 4. Eversion. About the words "ectropion" and "entropion". (?)	
5. Trichosis, diseases of hair.	
III. Diseases of the lacrimal system.....	(§44)
IV. Diseases of the cornea	(§45)
1. Ulcers. 2. Scars (their names). 3. Pterygium.	
V. Diseases of the iris	(§46)
VI. Diseases of the lens, "glaukosis". The meaning of the word "glaukos".....	(§47)
The concept of glaukosis (glaucoma) from Hippocrates to modern times.	
<i>The neurogenic disturbances of the visual organ</i> (§ 48 and following)	
Amblyopia and amaurosis.....	(§48 and following)
Amblyopia.....	(§48)
a. Amaurosis, b. Trephine operation against amaurosis, c. Test for amaurosis, d. Amaurosis due to wounds in the area of the eyebrows, e. Amaurosis due to blood loss. f. Opacities.	
The word "scotoma"	(§49)
<i>Half vision. The word for half blindness (Hemianopia, etc.) . . .</i> (§ 50)	
<i>Nyktalopia, day blindness of Hippocrates and his disciples</i>	(§51—53)
<i>Nyktalopia, night blindness of Galen and his followers, as defined by the Romans and the Arabs</i>	(§54)
<i>Nyktalopia and hemeralopia after the renaissance of science</i> (§ 55)	
<i>Subjective phenomena of the visual system</i> ... (§ 56 and following)	
<i>Floaters or muscae volantes (so-called "myodesopsia")</i>	(§56)
<i>Hallucinations and illusions, photopsia, flicker</i>	(§57)
<i>Refractive errors (according to the "problems" of Aristotle ?)</i>	(§58-59)
<i>Nearsightedness (the word "myopia")</i>	(§58)
<i>Presbyopia (the word "presbyopia")</i>	(§59)
<i>Strabismus (the words for squinting in the main languages)</i> . .	(§ 60)
<i>Heredity of strabismus</i>	(§61)
<i>Strabismus caused by paresis (and contracture)</i>	(§62)
<i>Nystagmus (the word "nystagmus")</i>	(§63)
<i>The word "hippus" in the ancient world</i>	(§64)
<i>The same word in modern times</i>	(§65)
<i>Survey of the 24 ocular diseases described by Hippocrates and his disciples</i>	(§66)
<i>Semeiology of the eye, ocular changes as prognostic signs</i> . .	(§ 67)

<i>Diagnostic and prognostic aphorisms from the "Prognoses of Kos"</i>	(\$68)
<i>Ocular surgery as described by Hippocrates</i>	(\$69)
<i>Ambidexterity</i>	(\$70)
<i>About instruments, silence during the operation, eye patch, asepsis. About the words "antiseptis" and "asepsis".</i>	(\$71)
<i>About the eye operations described by Hippocrates and his pupils</i>	(\$72—73)
<i>About scarification of the lids (blepharoxysis, ophthalmoxysis) and the excision of granulations</i>	(\$74)
<i>Ophthalmoxysis in antiquity (scarification of conjunctival granulations)</i>	(\$75)
<i>Ophthalmoxysis during the Middle Ages</i>	(\$76)
<i>Ophthalmoxysis in modern times</i>	(\$77)
<i>The excision of conjunctival granulations in antiquity, in the Middle Ages and in modern times</i>	(\$78)
<i>Operation against trichiasis as described by Hippocrates and his pupils</i>	(\$79)
<i>Drainage of a hypopyon</i>	(\$80)
<i>Removal of an arrowhead from the lid</i>	(\$81)
<i>Incision of the scalp for ocular diseases</i>	(\$82)
<i>Burning of the skin of the head for opacifications of vision . . .</i> (\$83)	
<i>Burning of the veins on the back for ocular diseases</i>	(\$84)
Threphine operation against amaurosis.	
Final comments about Hippocrates.

Galen: *About physiologic optics* (§ 102) **p.156**
Historical evaluations about achievements in optics in antiquity (§103)
There were no spectacles during antiquity, but focusing lenses (§104—105)
During antiquity people were not color blind, but they did not develop a color theory..... (§ 106—108)
The anatomy of the eye in ancient Greece . (§ 109 and following)
The importance of Greek anatomy. Rufus, the terminology of the parts of the eye1..... (§109)
The externally visible parts of the eye (§110)
The coats and fluids of the eye (§111)
Additional remarks about the optic nerve, the coats and the fluids of the eye. The names for the orbita..... (§112)
Celsus and the Latin names for parts of the eye (§113)
The anatomy of the eye by Galen's and our modern terminology..... (§ 114 and following)
A short description of the eye in Galen's book on the dogmas of Hippocrates and Plato (§114)
Galen's book "About the use of the Parts" ... (§ 115 and following)
Optic nerve, retina, crystalline lens, vitreous, choroid (§115)
(Neuron, neuritis, hyalitis. The names for the retina, choroid and ciliary body.)
The sclera. The connections between the coats of the eye .. (§116)
(Scleritis, Cyclitis. Iris.)
The six muscles which move the eyeball (§119)
(Retractor bulbi. The muscles of the lids.)
The canthus, caruncle, lacrimal organs (§120)
(About the words caruncle, canthus, the combinations with the word "dakryon".)
The optic nerves ("canals"), the chiasm (enables single binocular vision) (§121)
The modern anatomical nomenclature of the eye is based on the work by Galen us (§122)

<i>Survey of medical dictionaries</i>	(\$123)
Dictionaries of ophthalmology.	
Dictionaries of various languages.

The Roman literature about ophthalmology

after Celsus	(§ 187 and following) p.257ff
<i>Scribonius Largus</i>	(§ 187—189)
<i>Theodorus Priscian. Plinius Secundus (?)</i>	(§190)
<i>Cassius Felix</i>	(§191)
<i>Marcellus</i>	(§192)
<i>The stamps or impressions of Roman ophthalmologists</i>	(§193—194)
<i>Plinius Secundus (Pliny the Elden)</i>	(§195 and following)
<i>Naturalis Historiae</i>	(§195)
<i>The 40 eye diseases according to Plinius</i>	(§196)
<i>Scales (squama) according to Plinius</i>	(§197)
<i>Anagallis as a mydriaticum according to Plinius</i>	(§198)
<i>Spring water for eye diseases according to Plinius</i>	(§199)
<i>The ophthalmology according to Plinius, explained by some examples</i>	(§200)
<i>The medical book of Quintus Serenus</i>	(§201)
<i>Galen</i>	(§ 202 and following)
<i>The life, activities and manuscripts by Galen</i>	(§ 202)
<i>The ophthalmic manuscripts by Galen and the main chapters from the still extant manuscripts dealing with ophthalmology</i>r."	(§ 204)
<i>Galen: About Topical Diseases, IV</i>	(§ 205 and following)
<i>About paralyzes of the eye. Diseases of the optic nerve (amaurosis)</i>	(§ 205)
<i>Paralysis of ocular motility. Paralysis of the superior, inferior, medial and lateral rectus muscles and of the oblique muscles (paralysis of the retractor?).</i>	
<i>Diplopia. Ptosis. Lagophthalmus</i>	(§206)
<i>Incipient cataract (hypochyma) due to diseases of the stomach or the brain (differential diagnosis)</i>	(§ 207)
<i>Galen: About the Causes of Symptoms I (causes of visual disturbances)</i>	(§ 208 and following)
<i>Classification of visual disturbances (depending on whether the crystalline lens, the optic nerve, the brain or ocular adnexa are involved). Diseases of the crystalline lens and luxation of this organ</i>	(§ 208)
<i>Diseases of auxiliary parts of the eyeball, disorders of the pupil, opacities in front of the lens, diseases of the iris (enlargement, atrophy, luxation and rupture of the pupil), inflammation of the iris</i>	(§ 209)
<i>Changes in the aqueous. (Thickening of the aqueous in the posterior chamber = cataract. Partial cataract. Muscae volantes.)</i>	(§210)

<i>Disturbances of innervation, myopia, amblyopia</i>	(§211)
<i>Changes of the cornea. Foggy vision. Yellow vision.</i>	
<i>Red vision. Corneal ulcers and perforations</i>	(§212)
<i>Diseases of the conjunctiva and the lids</i>	(§213)
<i>Galen: System of Medicine XIV, chapter 13, about the cataract operation</i>	(§214)
<i>Galen: System of Medicine XIV, chapters 18 and 19, ocular therapy. The curing of a hypopyon with medication, by shaking the head, by paracentesis</i>	(§215)
<i>Remarks about hypopyon and cataract as interpreted by the ancient Greeks</i>	(§216)
<i>Etiology, location and nature of hypochyma</i>	(§217)
<i>Galen: System of Medicine XIII, chapter 22, about the use of local medication</i>	(§218)
<i>Galen: About ocular medication, about ophthalmia. corneal ulcers, local medications</i>	(§219)
<i>Visual disturbances as interpreted in antiquity, myopia, presbyopia, entoptic phenomena</i>	(§220)
<i>The nonmedical literature. Contagious ocular inflammations</i> (§221)
